RE: Flying W Tract – Master Plan MP23-0118

Dear Planning & Development Services,

This letter is requesting consideration for a waiver request for the Flying W Tract – Master Plan located Northeast of the intersection of FM 1102 & Watson Lane W. The blocks this waiver is to be applied to include blocks 20 and 37.

This Waiver Request is regarding the block length requirements located in Section 118-44(b) of the New Braunfels, Texas – Code of Ordinances:

- “Block lengths shall not exceed 1,200 feet except along arterial streets.”

Site Conditions

The Flying W Tract subdivision encompasses 362 Acres of land located northeast of New Braunfels in the New Braunfels Extraterritorial Jurisdiction (ETJ). Currently, the site is undeveloped with topography ranging from 724 feet to 874 feet with slopes exceeding 30% in some areas. The site neighbors other undeveloped properties as well as large lot residential properties.

Justification

The current definition of a block as defined by the New Braunfels, Texas – Code of Ordinances states a block is “bounded by streets or other transportation or utility rights-of-way, parks, streams, waterways, or any other barrier to the continuity of development.” The site does include an existing 100 foot utility transmission easement but is not defined by any existing streams, waterways, or parks. This waiver serves to address the blocks neighboring the large lot residential developments along the Northwest and Southwest boundary as shown on the included exhibit.

The neighboring Havenwood subdivision consists mostly of occupied 1 acre lots and abuts the Flying W Tract along the Northwest and Southwest boundary. There is a singular street stub provided to the Flying W Tract along the Northwest boundary from the Havenwood subdivision, which does allow for a street connection in a future Flying W unit. To reduce longer block lengths to the 1,200 foot maximum, this would require the use

of street stubs that terminate at the Flying W Tract boundary. This would result in the construction of street stubs without the intent of expansion while also leaving Havenwood residents unable to access them.

To assist in defining the boundary of blocks in the development, the applicant proposes the use of traffic calming measures as shown on the included exhibit. These measures would serve to reduce the overall speed of traffic along streets where the maximum block length is exceeded. Additionally, open spaces would be used intermittently to aid in breaking up block length. The open spaces proposed will be designated as common area, drainage, sewer, water, electric, gas, telephone, and cable TV easements.

Summary

The existing neighboring developments prevent the use of stub streets to assist in the breakdown of block lengths. Block lengths would be bounded instead by traffic calming measures and open space lots designated as common area, drainage, sewer, water, electric, gas, telephone, and cable TV easements.

The only properties impacted by the administrative exception are owned by the Applicant and will only benefit from the granting of the exception.

The applicant is requesting consideration for an administrative waiver to the block length requirement for the Flying W Subdivision development. The revision to the boundary of a block, given the hardship and uniqueness of the subject property and confirmation that granting this administrative exception, will not be detriment of the public's health, safety, and welfare, nor will be harmful to the subject property on the adjacent properties.

In our professional opinion, the proposed administrative waiver remains in harmony with the spirit and intent of the Code of Ordinances as it will not adversely affect the health, safety, or welfare of the public.

If you have any questions or desire any additional information, please call me at (210) 681-2951. Thank you.
Sincerely,

Andrew Macias
